Shaik Abdus Sattar

Software Engineer – AI/ML

+91-7032698579 shaik.abdus.sattar@outlook.com

linkedin.com/in/seventie — github.com/seventie — shaikabdussattar.vercel.app

Education

Amrita Vishwa Vidyapeetham Coimbatore, Tamil Nadu
Bachelor of Engineering in Computer Science; CGPA: 8.4/10.0 *Aug 2023 – Present*

Excellencia Junior College Hyderabad, Telangana
Intermediate/+2 (State Board): 98%; JEE-Mains: 95.87 percentile *2023*

Technical Skills

Machine Learning & AI: Deep Learning, CNNs, Transformers, NLP, Computer Vision
ML Frameworks & Data: PyTorch, TensorFlow, NumPy, Pandas, Scikit-learn
Programming Languages: Python, C++, Java, SQL, JavaScript, Haskell
Full-Stack Development: Node.js, React, Next.js, Tailwind CSS, Express.js, MongoDB

Research Experience

Clinically-Informed Deep Learning for Radiotherapy QA Prediction 2025 – Present
Research Assistant | Advisors: Dr. Amit Agarwal, Dr. Rose Kamal
- Automated pre-treatment Gamma-passing-rate prediction for radiotherapy QA, benchmarked against dose-map and complexity-metric ground truth, by building CNN/hybrid deep-learning models with clinically weighted loss functions.

Efficient 3D Molecular Graph Kernels for Molecular Property Prediction 2026 – Present
Research Assistant | Advisor: Dr. T. Ramraj
- Designing optimal data structures and a hierarchical 2D-to-3D filtering strategy to reduce the computational overhead of 3D molecular graph kernel construction for large-scale property prediction.
- Improved molecular similarity modeling for large-scale property prediction, validated via bond-length, bond-angle, and torsional feature comparisons, by designing scalable 2D-to-3D kernel frameworks.

Projects

Aurova: Mental Health Platform | *RAG, LLMs, Full-Stack*
- Shipped a privacy-first mental-health platform with anonymous journaling and peer support, secured via encrypted authentication, by building the full-stack app end-to-end.
- Reduced unsafe-response risk in AI counseling, verified via built-in crisis detection, by building a RAG-based LLM pipeline with context-aware personalization.

LFW Face Generation & Latent Space Editing | *AutoEncoders, VAE, Latent Interpolation, PyTorch*
- Synthesized photorealistic faces from the LFW dataset, evaluated via smooth latent-space interpolation, by training VAE models end-to-end in PyTorch.
- Isolated controllable facial attributes, confirmed via disentanglement analysis of the latent space, by implementing attribute-driven latent vector editing.

HASYv2 Handwritten Math Symbol Classification | *PyTorch, CNN, BatchNorm, Data Augmentation*
- Won 1st place in a university competition, achieving 84% accuracy across 369 handwritten symbol classes, by engineering a custom PyTorch CNN with BatchNorm and tuned augmentation.

Certifications

AWS Cloud Practitioner Essentials – AWS (2025)
Deep Learning Specialization – DeepLearning.ai (2025)
Machine Learning Specialization – Stanford Online (2025)

Achievements & Leadership

Head Coordinator – Gokulashtami Event (2025)
Hackathon Winner – IETE Hackathon (2025)
AIR 270 – AEEE Exam (2023)
1st Place – Western Group Music, Gokulashtami (2025)
